

INFORMATIONAL ITEM: PROJECT UPDATES

A. Hot Spot Program – Two Hot Spot studies were conducted in FY 2018: an analysis of the US 401/US 70/Mechanical Blvd intersections and surrounding network, and an analysis of the US 64/Hodge Road interchange general area in Knightdale. The final hot spot reports were distributed to affected local government staff in September and are posted on the MPO's webpage. For more information please contact Shelby Powell.

B. Commuter Corridors Study – Update

The Capital Area MPO selected the consulting firm Baseline Mobility Group, Inc. and sub-contractor RSG, Inc. to conduct a corridors study to address select, congested commuter corridors to improve mobility in the CAMPO planning area. Multi-modal commuter corridors in the region are increasingly congested even with major financial investments (TIP, MTP, Wake Investment Plan projects) into the area's transportation network. This technical study will develop and recommend various land use and transportation scenarios and investments that offer multi-modal, high impact solutions to relieve or mitigate anticipated congestion, policy recommendations that would be necessary to support the various scenarios, planning level costs for transportation elements in each of the recommended scenarios and a communications and public engagement strategy that can be deployed by the MPO to discuss the scenarios with stakeholders and the public. Proposals were received on Monday, October 15, 2018, the firm selected, and the technical work scope finalized. The Notice to Proceed was issued January 3, 2019 to the consulting team with the study's kick off workshop for a Technical Steering Committee (TSC) held on January 31, 2019. This workshop introduced the committee to the project scope, existing conditions, traffic data, issues and opportunities. Work continues with the firm meeting with staff from TJCOG, testing various data sets and variables within the CommunityViz model and meetings with the CAMPO team to determine test scenarios. The TSC workshop #2 of 3 scheduled for March 28, 2019 to discuss future scenarios, options and outreach strategies and materials was postponed until early April to allow additional time to run the various scenarios in the Community Viz model. The final Workshop #3 will be scheduled in May or early June to review findings and recommendations. The study will conclude June 30, 2019. (Staff Contact: Crystal Odum)

C. (SRTS) John Rex Endowment Grant Award Update - The Wake County Model Safe Routes to School (SRTS) Project is in its fourth year and will wrap up in 2019. This John Rex Endowment-funded effort is working toward the goal of improving child pedestrian safety in the county by increasing understanding of and support for SRTS programs and identify opportunities to improve policies and practices that improve pedestrian safety for all users, especially children. Three municipalities have installed their grant-funded infrastructure improvements near their model school: Cary, Fuquay-Varina, and Knightdale. WCPSS has adopted a wellness policy that encourages walking and biking to school and revised their guidelines for new/renovated school sites to give more clear direction on safe pedestrian access. At the municipal level, project partners have applauded the municipalities that have recently adopted comprehensive plans that recommend the adoption of a Complete Streets policy. At the CAMPO SRTS Subcommittee level, members supported the SRTS tasks components that are proposed for the FY 2020 Unified Planning Work Program (UPWP); which was adopted on February 20, 2019. The next SRTS Subcommittee meeting will be held on Friday, June 21, 2019 in CAMPO Conference Room A.

D. Southwest Area Study (Update) - CAMPO and NCDOT are working to update the original Southwest Area Study that will address the changes in land use and transportation in the area since 2012 and serve to inform the 2050 Metropolitan Transportation Plan (MTP). CAMPO staff and staff members from the consultant team of Ramey-Kemp & Associates, and Stantec prepared for and participated in the Southwest Area Study Public Workshop held on December 5th in Holly Springs. Following the 20-minute presentation by CAMPO staff, participants went to various stations around the room to view maps, complete surveys, and provide comments. Citizens who live and/or work in the Study area but could not attend the event have been encouraged to learn more at the Study website and complete the online survey: <https://www.questionpro.com/a/TakeSurvey?tt=ZZO4v/ZZVxM%3D>. The SOT meeting was held on Wednesday, January 30, 2019 at the Fuquay-Varina Public Services Center; with a focus on Safe Routes to School, Transit, and Hot Spots. The most recent CTT meeting was held on February 19 from 2:00 to 4:00 pm at the Apex Town Hall. The next joint CTT / SOT meeting will be held on Wednesday, April 10 from 2:00 to 4:30 pm at the Fuquay-Varina Service Center. The project website is located at <https://www.swastudy.com/>. (Staff Contact: Kenneth Withrow)

E. Triangle Regional Intelligent Transportation Systems Deployment Plan Update – The Capital Area MPO, Durham-Chapel Hill-Carrboro MPO, and NCDOT are jointly funding an update to the 2010 Intelligent Transportation Systems (ITS) Deployment Plan. The consultant team has completed all stakeholder interviews except Division 7 traffic engineering. The team is currently working on summarizing information collected through stakeholder interviews, documenting new and emerging technologies and strategies, updating the regional ITS architecture. The second stakeholder workshop was held on March 10th at the CAMPO offices. The draft regional ITS architecture is expected to be delivered in late April. The third and final stakeholder workshop will be held in early May and focus on reviewing the draft regional ITS architecture. (Staff Contact: Alex Rickard)

F. Triangle Strategic Tolling Study – Update

The Capital Area MPO, the Durham-Chapel Hill-Carrboro MPO, and NCDOT/NCTA, with the consulting firm WSP, have embarked on the development of a regional toll study that will identify the feasibility, applicability, and appropriateness of a variety of user pay systems for potential consideration across the Research Triangle region. Recommendations developed as part of this study will be used to inform the development of future Metropolitan Transportation Plan (MTP) updates. ECONorthwest, a company working along with the consultant team on the Tolling Study, provided corridor results from their Toll Optimization Model during the August 23 Core Technical Team (CTT) meeting. Outcomes from that exercise were presented to the Stakeholder Oversight Team (SOT) during their meeting in September; along with recommended highway facilities that would be incorporated into the “Tier-Two” analysis, which is currently underway. Finally, a Study update to MPO Boards was presented to the Joint MPO Executive Board meeting on Wednesday, October 31. Currently, the consultant team is working on the performance measures:

- Finalizing toll revenue and travel time savings results for the Tier 2 corridors
- Determining transit access by corridor
- ECONorthwest is developing a travel time reliability measure to show where express lanes would provide the most dependable peak hour travel (compared to general purpose lanes)
- Have started conceptual design for adding express lanes along the corridors; will provide high-level construction costs and identify where facilities will be easiest to build
- Using TRM socio-economic projections to determine where express lanes would improve job access and any EJ impacts

Tier-Two work will be completed near the end of January; with concept design and construction cost estimating requiring the most time to complete. The most recent CTT meeting was held on Friday, February 22, 2019 to review the tier-two material. The next SOT meeting will be held on April 11, 2019 in the Triangle J Council of Governments Main Conference Room from 1:30 – 3:30 pm. Additional information concerning the Triangle Strategic Tolling Study is located at <http://www.camponc.us/programs-studies/triangle-strategic-tolling-study>. (Staff Contact: Kenneth Withrow)

G. R.E.D. Priority Bus Lanes Study - Update

The Capital Area MPO is seeking guidance on developing a methodology for determining suitability of R.E.D. transit priority bus lanes or other corridor treatments in the CAMPO area and a priority list of recommended application of these treatments. The R.E.D. acronym refers to red painted lanes with shared access for all vehicles making right -hand turns, emergency vehicles and driveway access lanes. This study will provide a comprehensive review of best practices for transit priority lanes and R.E.D lane shared access in peer areas. The study recommendations will evaluate the applicability of priority lanes through qualitative analysis and the development and deployment of a methodology for evaluating and prioritizing transit priority lane treatments in the CAMPO area. CAMPO invited qualified consulting firms, or individuals, who are experienced in transit bus lanes assessment and analysis to submit proposals on August 1, 2018. Proposals were received/opened Monday, August 27, 2018 and a Notice to Proceed to conduct the R.E.D. Bus Priority Bus Lanes study issued November 14, 2018 to the firm Renaissance Planning, Inc. and subconsultant WSP, Inc. A core technical team (CTT) created to support the study met the same day with a kick off meeting to introduce the team and to outline the goals of the study, expectations and deliverables. Work is ongoing including Tasks 2 and 3, a technical overview of R.E.D. priority bus lanes and other priority bus treatments, peer agency and existing plans review. During Workshop #1, held on March 5, 2019, the CTT reviewed the consultant team's findings via a technical overview report and a list of plans and studies. The CTT also provided input on performance measures and standards and reviewed maps of potential R.E.D. bus lane corridors. Work continues with document/Existing Conditions report reviews with the next work shop on the existing conditions analysis to be scheduled in the Spring/Summer. The study is scheduled to be completed in fiscal year 2020. (Staff Contact: Crystal Odum)
